

Sport C6 Subframe

As Shown **\$7445**

AME's Sport C6 Subframe Is Engineered For Corner-Carving

There are a number of important factors that make this subframe ideally suited to a number of applications for both performance and adaptability standpoints.

Wide frame rails —CAD engineered for your exact year/make/model vehicle and desired stance— can accommodate a variety of old school and modern Chevy, Ford and Mopar engines. High strength steel coil-over mounts are designed to withstand high cornering and bump loads. The power steering rack (20:1 ratio) is positioned low to facilitate lower ride heights and provide additional clearance for both turbocharged and

centrifugally supercharged engines.

Tall C6 forged aluminum spindles are employed to provide superior camber gain and roll center migration. They're attached to specially designed DOM steel control arms that are TIG welded in precision CNC machined fixtures. It's designed to accommodate high static negative camber angles for low treadwear (UTQG rating) tires and provide ample clearance for most popular tire/wheel packages.

Other important features include high strength forged steering arms, ball joints that are serviceable, and a 3-position hollow sway bar with

adjustable end links to eliminate preload. Add a pair of Strange adjustable coil-over shocks with a spring rate matched to your application and you have all the necessary ingredients to build a contemporary high performance street machine.

Clearly, the AME Sport C6 subframe is ideally suited to high performance G-Machines and Pro Touring cars that are "Track Day" worthy. This front end can also be part of a complete platform frame. For more details, including adaptability to various applications and pricing info, call AME's experienced technical/sales staff for personalized assistance.
